Installation SRS 2019

STÄUBLI®
ROBOTICS

The University of Girona has 16 SRS 2019 licenses. In order to use these licenses, students can install the program and use it by connecting to a UdG server that manages the licenses.

Students should make responsible use of these licenses, using them only for the resolution of the exercises proposed by UdG and minimizing the use of the licenses so that all students and teachers can use them. Teachers may block the use of licenses from outside the robotics lab, in order to ensure the proper functioning of the classes in the robotics lab.

In order to install the SRS2019 environment with the emulators of the corresponding TX60 and TS60 robots, you must download the program from the following link:

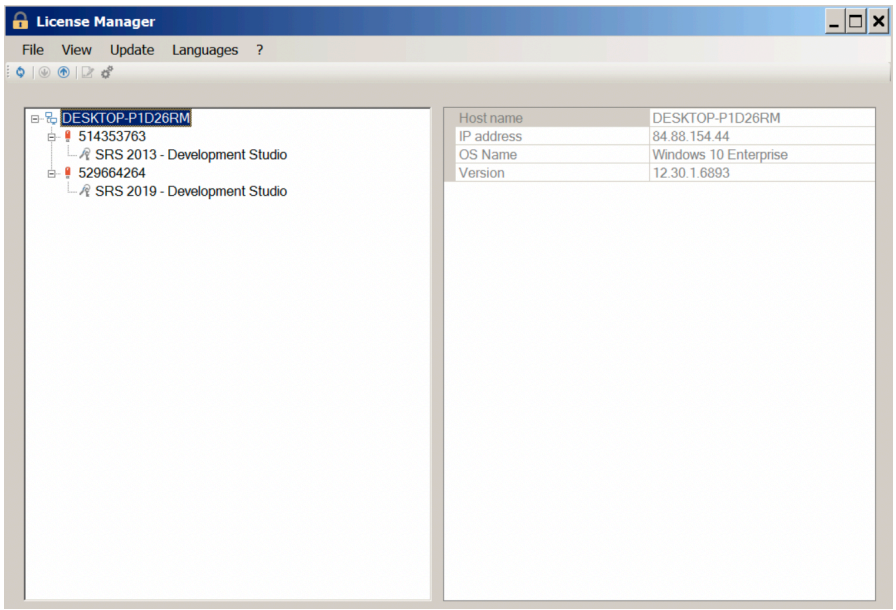

https://drive.google.com/file/d/1Q2iRcVC9VIxtBaUEzUfVfFahbp0PFdG-/view?usp=sharing

It is recommended to use Windows 7 or higher.

During the installation process, all the options indicated when running the "setup.exe" file must be installed.

Once the installation is complete, you must enter the address of the UdG license server. Follow the following steps:

• Go to "Home / SRS License Manager"
• in the "License Manager" window go to "View / Control Center"
• in the "License Manager: Control Center" window go to "Configuration"
• go to the "Access to Remote License Managers" tab
• Uncheck “Broadcast Search for Remote Licenses”
• type in “Specify Search Parameters”: 84.88.154.44
• press "Submit" and then in a few seconds the following should appear in the "License Manager":

Each time you run SRS, the program will check for a connection to the license server and license availability. If so, the program will allow you to edit and simulate your application.
